

# ALU ANCHOR

---

The Alu Anchor is built with an Aluminum alloy that guarantees strength and durability even in most corrosive environments. It has two fixation points and is suited for diverse fall protection equipment like lanyards, SRLs or vertical/horizontal temporary lifelines.

# ALU ANCHOR

## Cleaning & maintenance

Products do not require any special maintenance, aside from cleaning. Cleaning of your SDA product is important to prolong its lifetime. Use cold water and soap to eliminate all type of residue (dirt, chemicals, etc.). Dry gently out of sunlight. After use, place your product in a well-ventilated area and avoid excessive heat. Proper care prevents premature wear of the equipment.

## Inspection

Look for damage, deterioration or malfunction before and after every use. Inspections should only be made by trained and authorized personnel. Every inspection should be registered in the product dossier.
