

The Tensioner is designed to be the permanent interconnection between the cable and the End Points. It has a tension adjustment system that works by rotation and is blocked with locking nuts once the desired tension is reached. The connection to the cable is made by crimping.

Cleaning & maintenance

Products do not require any special maintenance, aside from cleaning. Cleaning of your SDA product is important to prolong its lifetime. Use cold water and soap to eliminate all type of residue (dirt, chemicals, etc.). Dry gently out of sunlight. After use, place your product in a well-ventilated area and avoid excessive heat. Proper care prevents premature wear of the equipment.

Inspection

Look for damage, deterioration or malfunction before and after every use. Inspections should only be made by trained and authorized personnel. Every inspection should be registered in the product dossier.
