

OVERHEAD SHUTTLE

The Overhead Shuttle is the connection element of the user to the lifeline and offers an optimal passage through the entire length of the system in combination with a self-retracting lifeline. The Overhead Shuttle slides smoothly along the cable and the Intermediate Points.

Cleaning & maintenance

Products do not require any special maintenance, aside from cleaning. Cleaning of your SDA product is important to prolong its lifetime. Use cold water and soap to eliminate all type of residue (dirt, chemicals, etc.). Dry gently out of sunlight. After use, place your product in a well-ventilated area and avoid excessive heat. Proper care prevents premature wear of the equipment.

Inspection

Look for damage, deterioration or malfunction before and after every use. Inspections should only be made by trained and authorized personnel. Every inspection should be registered in the product dossier.
