

SHUTTLE VERTICAL

The vertical shuttle is a simple connecting element offering safe and smooth sliding along the vertical lifeline. The shuttle can be attached and detached from the system with a quarter turn movement and together with a carabiner it prevents accidental releases from the cable and guarantees ultimate performance and reliability.

Cleaning & maintenance

Products do not require any special maintenance, aside from cleaning. Cleaning of your SDA product is important to prolong its lifetime. Use cold water and soap to eliminate all type of residue (dirt, chemicals, etc.). Dry gently out of sunlight. After use, place your product in a well-ventilated area and avoid excessive heat. Proper care prevents premature wear of the equipment.

Inspection

Look for damage, deterioration or malfunction before and after every use. Inspections should only be made by trained and authorized personnel. Every inspection should be registered in the product dossier.
